

PROJECT PROPOSAL

SHE SHIELD

Cyber-Integrated Safety Platform for Women

Integrating Physical Safety, Cyber Safety & AI-Powered Threat Detection

1. Project Title And Short Description

Project Title

Short Description

SHE SHIELD is a unified women safety platform that integrates physical safety and cyber safety into a single application. The platform provides emergency SOS services, AI-powered threat detection, cybercrime reporting, travel monitoring, guardian coordination, complaint tracking, and secure digital evidence management. Its objective is to improve women's safety by enabling rapid emergency response, simplifying cybercrime reporting, and providing real-time protection during travel and online activities.

2. Application Type

SHE SHIELD follows a hybrid application architecture consisting of both mobile and web platforms.

Mobile Application (Primary)

Mobile Application (Primary Platform)	
• User Registration & Auth • Emergency SOS • Cybercrime Reporting	• Travel & Cab Monitoring • Guardian Management • AI Safety Assistance

Web Application (Admin)

Web Application (Admin Dashboard)	
• User Management • Complaint Monitoring	• Evidence Review • Platform Activity Audit

This hybrid architecture ensures that users receive safety services through the mobile application while administrators efficiently manage the platform through a web-based dashboard.

3. Motivation And Problem Statement

Women today encounter numerous safety challenges in both physical and digital environments. Physical risks include unsafe travel, harassment, stalking, delayed emergency response, and limited access to immediate assistance. In the digital world, women are increasingly affected by cyberstalking, phishing, identity theft, blackmail, online harassment, and other cybercrimes.

Existing solutions generally focus on either physical safety or cyber safety, requiring users to rely on multiple disconnected applications. This lack of integration results in delayed responses, poor coordination, and fragmented evidence management.

SHE SHIELD addresses these challenges by providing a single platform that combines emergency assistance, cybercrime reporting, AI-based threat detection, travel monitoring, guardian coordination, and complaint tracking, enabling proactive protection and faster response during emergencies.

4. Target Users And Use Cases

Target Users

Target Group	Primary Activities
Women Users	Emergency SOS, Cybercrime Reporting, Travel Monitoring, AI Alerts
Guardians	Real-time Location Tracking, Emergency Notifications
Administrators	Platform Governance, Complaint Auditing, User Management

5. Scope And High-Level Features

The project includes the following major modules:

Emergency & AI	Digital Security	Monitoring & Admin
Emergency SOS Center	Cybercrime Reporting	Travel/Cab Monitoring
AI Risk Assessment	Evidence Management	Admin Control Center

These modules provide an integrated safety ecosystem that enables emergency protection, cybercrime assistance, travel safety, and centralized administration.

6. Technology Stack

Component	Technology
Mobile Frontend	Flutter
Web Frontend	React.js
Backend	Node.js, Express.js
Database	MongoDB
Authentication	JWT Authentication
AI/ML	Python, NLP Models
Maps & Location	Open Street Maps API
Notifications	Firebase Cloud Messaging
Security	AES-256 Encryption, RBAC

7. Roles And Responsibilities Of Team Members

Module / Responsibility	Description	Assigned Members
Client Application Engineering	Develop the Flutter mobile application, implement responsive UI/UX, navigation, and user interaction for core safety	Krishna,Priya

Module / Responsibility	Description	Assigned Members
Backend Systems & AI Solutions Engineering	Design REST APIs, implement business logic, integrate AI threat detection, and manage server-side services.	Hitarth, Priya,Jainam
Data Engineering & Cybersecurity	Design and maintain the database, implement authentication, encryption, secure evidence storage, and access control.	Maahir,Jenil
Platform Integration & DevOps Engineering	Integrate frontend, backend, AI, and third-party APIs, perform testing, deployment, monitoring, and system maintenance.	Jay,Jainam
Authentication & Identity Management	Implement JWT/OAuth authentication, user registration, role-based access control, and session management.	Jay,Hitarth,Nirmal
Location Services & Emergency Response	Develop SOS functionality, live location sharing, guardian tracking, and travel monitoring features.	Krishna,Maahir
Cybercrime Reporting & Evidence Management	Build cybercrime complaint workflows, secure evidence upload, complaint tracking, and reporting modules.	Jenil,Nirmal

8. Timeline With Milestones

Week	Milestone
Week 1	Requirement gathering, literature review, and project planning
Week 2	System architecture design, technology stack finalization, and UI/UX
Week 3	Database schema design and backend project setup
Week 4	User registration, login, and JWT authentication implementation
Week 5	Development of the mobile application UI and navigation
Week 6	Emergency SOS Center and Guardian Management implementation
Week 7	Travel, Cab, and Walk Monitoring modules
Week 8	Cybercrime Reporting and Complaint Tracking modules
Week 9	Backend API development and database integration
Week 10	AI-based Threat Detection and Risk Assessment module
Week 11	Admin Dashboard development using React.js
Week 12	Integration of frontend, backend, AI, and web dashboard
Week 13	Feature enhancements, bug fixing, and performance optimization
Week 14	System integration, deployment, and user acceptance testing
Week 15	Final documentation, project report preparation, and presentation creation
Week 16	Final project demonstration, evaluation, and submission
